

Introduction

This volume consists of profiles for each transit agency filing a National Transit Database Report for the 1999 Report Year (January 1 through December 31, 1999). Each profile consists of general, financial, and modal data, as well as performance and trend indicators for the year.

For the 1999 Report Year, 587 transit agencies submitted reports to the National Transit Database. Of these, 64 received exemptions from detailed reporting because they operated nine or fewer vehicles across all modes of service. Another 7 were excluded after extensive review and validation raised questions concerning the data submitted. Consequently, 516 transit agencies compose the full 1999 Report Year database.

The transit profiles have been arranged alphabetically by state and urbanized area size. Transit agencies are listed by their legal name as reported to the National Transit Database Program, and include their acronym, if known.

The left side of each profile (System Wide Information) contains both general and financial information. General information includes urbanized area statistics, service area statistics, service consumption, service supplied, and vehicles operated in maximum service. Financial information includes fare revenues earned, sources of operating funds expended, summary of operating expenses, sources of capital funds expended, and uses of capital funds. Two pie charts depict sources of operating funds expended and capital funds expended. No chart appears when an agency's report indicates a zero value or only one source of funds.

The right side of each profile (Modal Information) presents selected transit agency characteristics by mode, including selected financial and service characteristics. Due to space limitations a maximum of four modes are shown, based on operating expenses. Bus and Heavy Rail modes always appear in columns one and two if operated by an agency. Performance measures are derived from individual mode characteristics and represent service efficiency, cost effectiveness, and service effectiveness. Line graphs highlight selected performance measures during the past five years for the modes shown in columns one and two. Anomalies may exist in these graphs as a result of one or more of the following: (1) a report may not have been received for a particular year, (2) a waiver may have been granted; and (3) following validation, data may have been partially or completely deleted.

Data whose reliability is deemed questionable is included in the tables followed by a "Q." The data affected are those where the transit agency failed to respond satisfactorily to questions raised during the validation process and/or did not collect the data in accordance with FTA's definitions and requirements. In addition, "W" indicates that the reporting agency was granted a waiver, deleted data is indicated with a "D", and "N" indicates data that was not reported.

Code	Indication
Q	Questionable
W	Waived
D	Deleted (Some or all data was deleted.)
N	Not reported

Appendix A provides an aggregate profile for all transit agencies included in the 1999 database. Appendix B identifies agencies receiving FTA-approved reporting exemptions. Appendix C lists agencies deleted from the 1999 publications. Appendix D provides a cross-reference identifying where each data item in the profiles can be located in an agency's National Transit Database Report, as well as the algorithms used in determining these items. Additional National Transit Database publications available from the Federal Transit Administration (FTA) include: *The National Transit Database Data Tables*; *The National Transit Summaries and Trends*; and *Transit Profiles for the Thirty Largest Agencies*. All are published annually and are available for viewing and download on the Web at <http://www.ntdprogram.com>.
